List of Figures

Figure 1: Life Urban/Rural (,				5
Figure 2: L Multiple Depr					
Figure 3: L Community F					

Main Points

- Men in rural areas remote and accessible can expect to live over 3 years longer (76.9 and 76.7 years respectively) than men in large urban areas (73.4 years);
- Women in rural areas remote and accessible can expect to live almost 2 years longer (80.9 and 80.8 years respectively) than women in large urban areas (78.9 years);
- Men in the 10% least deprived areas of Scotland (according to the Scottish Index of Multiple Deprivation 2006) can expect to live for 13.1 years more than men in the 10% most deprived areas (80.2 years compared with 67.1 years);
- Women in the 10% least deprived areas of Scotland can expect to live 8.6 years longer than those in the 10% most deprived areas (83.6 years compared with 75.0 years);
- There is decreasing life expectancy with increasing deprivation;
- The Community Health Partnership area with the lowest life expectancy for men and women is North Glasgow (69.2 years and 76.0 years respectively). The highest are East Dunbartonshire for men (78.0 years) and East Renfrewshire for women (81.9 years);

1. Introduction

This publication summarises the Registrar General for Scotland's life expectancy figures for the following "special areas" within Scotland:

- Urban and rural areas, in line with the Scottish Government's 2005-2006
 Urban Rural Classification, which splits Scotland into large urban areas, other
 urban areas, accessible small towns, remote small towns, accessible rural
 areas and remote rural areas see <u>Scottish Executive Urban Rural
 Classification 2005-2006</u>.
- Deprivation areas, which are derived from the Scottish Index of Multiple Deprivation (SIMD) 2006 developed by the Scottish Government (see http://www.simd.scotland.gov.uk). The SIMD ranks the 6,505 Scottish data zones (areas of compact shape and similar social characteristics, with populations of between 500 and 1,000 people) from 1 (most deprived) to 6,505 (least deprived). The SIMD rank can be split into twenty vigintiles, ten deciles or five quintiles, for example, vigintile 1 contains the 5% most deprived areas of Scotland and vigintile 20 contains the 5% least deprived areas; quintile 1 contains the 20% most deprived areas and quintile 5 contains the 20% least deprived; and so on. Life expectancy figures in deprivation areas have been presented in this way.
- Community Health Partnerships (CHPs), which are organisations responsible for managing community health services in Scotland. CHPs develop existing links between community and hospital-based health services

and local authority services such as social work, housing, leisure and education. Their principal aim is to improve the long-term health and wellbeing of communities and enhance the quality of health and social care services. In some areas, such as Glasgow, the Partnerships are responsible for many local social care services and are therefore called Community Health and Care Partnerships (CHCPs) and are run jointly by the NHS with local Council partners.

Life expectancy statistics for the whole of Scotland, and for each Council and NHS Board area, were given in <u>Life Expectancy for Administrative Areas within Scotland</u>, <u>2004-2006</u> published by GROS on 4 September 2007. **Section 4** of that publication explains the terms used in this publication.

The figures quoted in this publication are all period life expectancies. Period life expectancies are calculated using age specific mortality rates for a given period, with no allowance for any actual or projected future changes in mortality. For more information on "Life Expectancy at Birth" see **Section 2** of <u>Life Expectancy for Administrative Areas within Scotland</u>, 2004-2006 publication.

This publication gives expectation of life at an "exact age". This is the average number of years that those at this age are expected to live thereafter. These extracts from period life tables are constructed from the estimated population in 2004, 2005 and 2006 and the total number of deaths registered in these years. The column headed I_x shows the numbers who would survive to the exact age of x, out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2004-2006. The column headed e_x° shows the expectation of life – that is, the average number of years of life left to persons aged exactly x who are subject to the 2004-2006 mortality probabilities from age x onwards. For example, 76.5% of the male population and 86.0% of the female population of Large Urban areas can expect to survive to age 65, and a male aged 65 living in a Large Urban area could expect to live on average another 15.3 years, and a female aged 65 could expect to live on average another 18.4 years.

These life expectancy figures may be of particular use in monitoring and investigating health inequality issues across Scotland and in setting public health targets, particularly when used in conjunction with the Scottish Index of Multiple Deprivation 2006.

2. Discussion of Results

Men have a shorter life expectancy than women both in Scotland generally and within each CHP, Urban/Rural and Deprivation area. There is however much variation from place to place.

2.1 Life Expectancy at Birth by Urban/Rural Classification

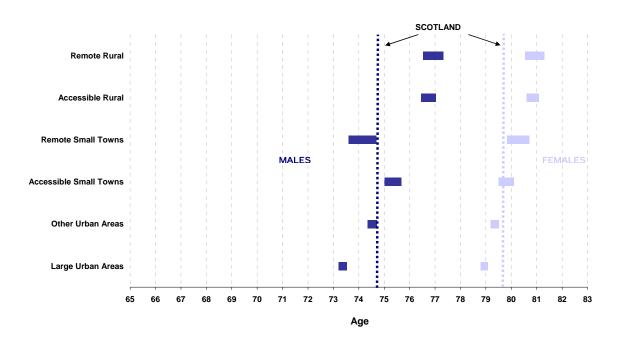

<u>Table 1</u>, <u>Table 6</u> and <u>Figure 1</u> show that the lowest male life expectancy figure, 73.4 years, was for men living in Large Urban areas. Remote Rural areas and Accessible Rural areas had the highest life expectancy figures (76.9 years and 76.7 years respectively).

The pattern for women was very similar, although their life expectancy was invariably higher. Women living in Large Urban areas had the shortest life expectancy (78.9 years) and those living in Rural areas – Remote and Accessible – the longest (at 80.9 and 80.8 years respectively).

In all Urban and Rural areas, female life expectancy (at birth) was longer than male life expectancy. However, <u>Figure 1</u> shows the gap between male and female life expectancy was widest in Remote Small Towns – where men could expect to live 74.1 years from birth but women could expect to live 80.3 years – over 6 years longer.

Figure 1 also shows that people in Large Urban areas had a slightly shorter life expectancy at birth than the Scottish average (for males, the difference was 1.2 years and for females 0.7 years). At the other end of the scale, people in Accessible Rural and Remote Rural areas lived longer than the Scottish average (over 2 years extra for men and over 1 year extra for women). The differences in life expectancy at age 60 were narrower, but 60 year old people living in Remote Rural areas could still look forward to a lifespan approximately 18 months longer than the Scottish average. 60 year olds living in Remote Rural areas could expect to live about a further 2 years beyond that of their counterparts in Large Urban areas.

Figure 1: Life expectancy at birth with 95% confidence intervals for Scottish Urban/Rural Classification areas, 2004-2006 (Males & Females)

2.2 Life Expectancy at Birth by SIMD Deprivation Areas

Male and female life expectancy in each deprivation decile, quintile and vigintile is shown in <u>Table 2</u>, <u>Table 3</u>, <u>Table 4</u> and <u>Table 7</u>. <u>Figure 2</u> illustrates male and female life expectancy in each deprivation decile.

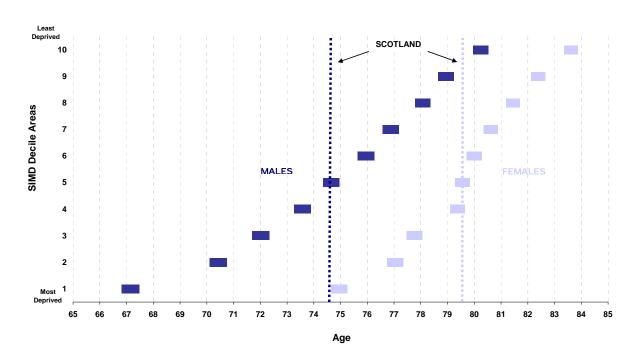

Men born in the 10% least deprived areas of Scotland could expect to live for 80.2 years – 13.1 years longer than in the 10% most deprived areas (67.1 years).

Female life expectancy shows a very similar pattern, but again invariably higher. In the 10% least deprived areas women could expect to live for 83.6 years, but women in the 10% most deprived had an expected lifespan of 75.0 years – 8.6 years shorter.

Figure 2 shows a smooth trend of decreasing life expectancy with increasing deprivation. **Figure 2** also illustrates that, as deprivation decreased, the gap between male and female life expectancy decreased. For example, in the 10% most deprived areas, women could expect to live 7.9 years more than males but, in the 10% least deprived areas, this gap was shortened to 3.4 years.

People in the 10% most deprived areas had a shorter life expectancy at birth than the Scottish average (7.5 years less for men and 4.6 years less for women). On the other hand, people in the 10% least deprived areas lived longer than the Scottish average (5.6 years more for men and 4.0 years more for women). The differences in life expectancy at age 60 were narrower, but 60 year old men in the 10% least deprived areas could still look forward to a lifespan 3.2 years longer than the Scottish average and 6.8 years longer than men in the 10% most deprived areas. Similarly for females, life expectancy at age 60 in the 10% least deprived areas was 2.7 years longer than the Scottish average and 5.4 years longer than women in the 10% most deprived areas.

Figure 2: Life expectancy at birth with 95% confidence intervals for Scottish Index Multiple Deprivation 2006 Decile area, 2004-2006 (Males & Females)

2.3 Life Expectancy at Birth by Community Health Partnership Areas

Male and female life expectancy at birth, for each CHP area, is shown in <u>Table 5</u>, <u>Table 8</u> and <u>Figure 3</u>.

Male life expectancy was shortest for those living in North Glasgow, East Glasgow and Southwest Glasgow (69.2, 69.3 and 70.4 years respectively). Men living in these areas could expect a life span 5.4, 5.3 and 4.2 years (respectively) shorter than the Scottish average. Their counterparts in 14 other CHPs also had a lower life expectancy than the Scottish average (see <u>Figure 3</u>).

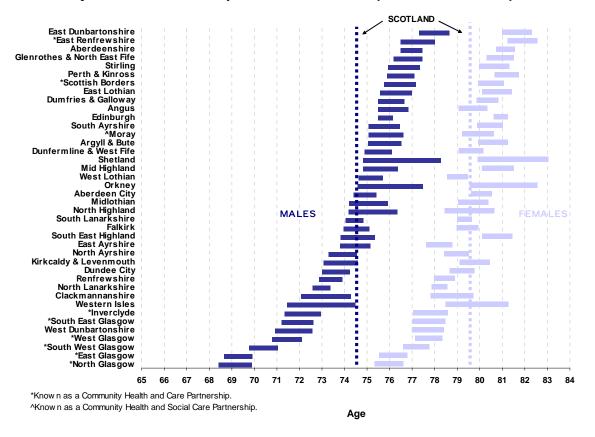

In contrast, male life expectancy was at its highest in East Dunbartonshire (78.0 years), East Renfrewshire (77.2 years) and Aberdeenshire (77.0 years) – 3.4, 2.6 and 2.4 years (respectively) longer than the Scottish average. This is consistent with the fact that Glasgow City was the local authority area with the poorest life expectancy and East Dunbartonshire the best, according to the life expectancy figures published in September 2007 (in Life Expectancy for Administrative Areas within Scotland, 2004-2006).

Women had longer life expectancy at birth than men. North Glasgow, East Glasgow and Southwest Glasgow again had the shortest female life expectancy at 76.0, 76.2 and 77.2 years. Women living in these areas could expect a shorter lifespan than the Scottish female average – by 3.6, 3.4 and 2.4 years respectively for the three poorest CHPs. A further 13 CHPs also had a lower life expectancy than the Scottish average (see <u>Figure 3</u>).

On the other hand, at the opposite end of the scale East Renfrewshire had the highest female life expectancy at 81.9 years, followed by East Dunbartonshire and Shetland (81.7 and 81.5 years) – about 2 years longer than the Scottish average. Again this matched the picture at local authority level: Glasgow City had the lowest female life expectancy and East Renfrewshire the highest in the September 2007 Life Expectancy for Administrative Areas within Scotland, 2004-2006 publication.

The gap between the CHP with the shortest male life expectancy at birth and the CHP with the longest was 8.8 years. This gap was narrower for females at 5.9 years. The differences in life expectancy at age 60 were narrower, but 60 year old men living in Shetland could still look forward to a lifespan 2.2 years longer than the Scottish average and 5.7 years longer than men living in East Glasgow. Similarly, 60 year old women living in Shetland could look forward to a lifespan 2 years longer than the Scottish average and 4.4 years longer than their counterparts in North Glasgow.

Figure 3: Life expectancy at birth with 95% confidence intervals for Scottish Community Health Partnership Areas, 2004-2006 (Males & Females)

3. Accuracy of Results

Life expectancy at birth, like most statistics, is an estimate which is subject to a margin of error. The accuracy of the results can be indicated by calculating a confidence interval which provides a range of values within which the true underlying life expectancy would lie (with 95% probability).

The 95% confidence intervals for life expectancy at birth are given in <u>Table 6</u>, <u>Table 7</u> and <u>Table 8</u>, and are illustrated in <u>Figure 1</u>, <u>Figure 2</u> and <u>Figure 3</u> for Urban/Rural Classification, Deprivation Decile and Community Health Partnership areas within Scotland.

There is no simple 'rule of thumb' for the size of confidence intervals. But they largely depend on the size of the population, so confidence intervals for areas with small populations tend to be wider. It is also worth noting that life expectancy results in these areas can be affected by the random variation in the number of annual deaths. This means that the results can be erratic and vary from year to year.

More information about the methods used to calculate the standard errors and confidence intervals used in this report can be found in the Office for National Statistics methodology paper <u>Life expectancy at birth: methodological options for small populations</u>.

Note: This abridged life table is constructed from the estimated population in 2004, 2005 and 2006 and the total number of deaths registered in these years. The column headed I_x shows the numbers who would survive to the exact age of x, out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2004-2006. Column e_x° shows the expectation of life, that is, the average number of years of life left to persons aged exactly x who are subject to the 2004-2006 mortality probabilities from age x onwards.

Note: This abridged life table is constructed from the estimated population in 2004, 2005 and 2006 and the total number of deaths registered in these years. The column headed I_x shows the numbers who would survive to the exact age of x, out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2004-2006. Column e_x° shows the expectation of life, that is, the average number of years of life left to persons aged exactly x who are subject to the 2004-2006 mortality probabilities from age x onwards.

Table 3: Abridged life table, by sex, age and deprivation quintile, Scotland 2004-2006

Note: This abridged life table is constructed from the estimated population in 2004, 2005 and 2006 and the total number of deaths registered in these years. The column headed I_x shows the numbers who would survive to the exact age of x, out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2004-2006. Column e_x° shows the expectation of life, that is, the average number of years of life left to persons aged exactly x who are subject to the 2004-2006 mortality probabilities from age x onwards.

Note: This abridged life table is constructed from the estimated population in 2004, 2005 and 2006 and the total number of deaths registered in these years. The column headed l_x shows the numbers who would survive to the exact age of x, out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2004-2006. Column e_x° shows the expectation of life, that is, the average number of years of life left to persons aged exactly x who are subject to the 2004-2006 mortality probabilities from age x onwards.

Table 5: Abridged life table, by sex, age and Community Health Partnership, Scotland 2004-2006

Note: This abridged life table is constructed from the estimated population in 2004, 2005 and 2006 and the total number of deaths registered in these years. The column headed l_x shows the numbers who would survive to the exact age of x, out of 100,000 persons who, from birth, were subject to the mortality probabilities indicated by the death records for 2004-2006. Column e_x" shows the expectation of life, that is, the average number of years of life left to persons aged exactly x who are subject to the 2004-2006 mortality probabilities from age x onwards.

 $^{^1}$ Known as a Community Health and Care Partnership. 2 Known as a Community Health and Social Care Partnership.

NOTES ON STATISTICAL PUBLICATIONS

ENQUIRIES ABOUT THIS PUBLICATION Enquiries should be addressed to: Statistics Customer Services, General Register Office for Scotland, Ladywell House, Edinburgh, EH12 7TF Telephone: (0131) 314 4299, Fax: (0131) 314 4696, E-mail: customer@gro-scotland.gsi.gov.uk.

THE GENERAL REGISTER OFFICE FOR SCOTLAND (GROS) GROS is the devolved Government department in Scotland responsible for the registration of births, marriages, civil partnerships, deaths, divorces and adoptions in Scotland. We are responsible for the Census of Population in Scotland which we use, with other sources of information, to produce population and household statistics. We make available important information for family history. Our website is www.gro-scotland.gov.uk/.

OTHER GROS STATISTICS Further detailed statistics produced by GROS are available from the statistics pages of the GROS website (www.gro-scotland.gov.uk/statistics/index.html). Statistics from the 2001 Census are on the Scotland's Census Results On-Line website (www.scrol.gov.uk) and on the Census section of the main website (www.gro-scotland.gov.uk/census/index.html).

Information about future publications is provided on the GROS website (www.groscotland.gov.uk/futurepb.html). If you would like to receive notification of forthcoming statistical publications, you can register your interest on The Scottish Government's ScotStat web site at www.scotland.gov.uk/Topics/Statistics/scotstat/Intro.

COMPLAINTS AND SUGGESTIONS If you are not satisfied with our service, please write to Kirsty MacLachlan, Head of Demography Division, Room 1/2/7, Ladywell House, Ladywell Road, Edinburgh, EH12 7TF, Telephone: (0131) 314 4242, E-mail: kirsty.maclachlan@gro-scotland.gsi.gov.uk.

We also welcome any comments or suggestions that would help us to improve our standards of service.
